Abstract not available for DE10043630

Abstract of corresponding document: **US2002026836**

A pressure measurement cell is provided whose measurement accuracy is stable over a long time, having a first and a second base body (1, 3), and arranged between the first and the second base body (1, 3), at a distance from them, a measurement membrane (5) which has a low-pressure side on which it is connected to the first base body (1), at a first outer edge, to form a first chamber (7), and which has a high-pressure side on which it is connected to the second base body (3), at a second outer edge, to form a second chamber (9), the first edge being wider than the second edge.
